

Harun Slahaldin Omar

Software Engineering Student

Laval, QC | harunager@outlook.com | (438) 508-5226 | LinkedIn | GitHub | Portfolio

EDUCATION

- **Master of Engineering, Software Engineering — Concordia University** Jan. 2027 – May 2028
Co-op Option Expected Graduation: May 2028
- **Bachelor of Engineering, Software Engineering — Concordia University** Sept. 2022 – Present
GPA: 3.3 Expected Graduation: Fall 2026
- **DEC in Pure and Applied Science — Vanier College** Sept. 2020 – May 2022

PROJECTS

- **MeMantra — Mental Wellness Mobile Application (Capstone)** github.com/MeMantraa/MeMantra
 - Co-developed a **React Native/Node.js** mental wellness app with an **11-person Agile team** across a full academic release cycle.
 - Built the app's main tab navigation, connected mobile screens to backend APIs, and wrote automated app and API tests with **Jest** and **Supertest**.
 - Led the database migration from Oracle to **PostgreSQL** and contributed to the automated test, code-quality, and security checks used before deployment.
- **Vessel — E-Commerce Portfolio Demo** github.com/omar-haha/rcca
 - Built a bilingual e-commerce demo in **Next.js/TypeScript**, adapted from a real storefront codebase and deployed on **Vercel**.
 - Designed checkout to recalculate prices and validate current stock on the server, preventing outdated or modified browser data from creating incorrect orders.
 - Linked "Verified Buyer" reviews to completed orders, kept optional analytics off until consent, and documented a separate **Docker**-based deployment path.
- **Sillage — Event-Driven Multi-Asset Portfolio Engine** github.com/omar-haha/sillage
 - Built a portfolio platform in **Python/FastAPI** with a **React/TypeScript** dashboard, using the same decision engine for backtests and live trading across ETFs and crypto.
 - Prevented look-ahead bias by limiting every data read to a known point in time and delaying close-time decisions until the next market open.
 - Added durable order records and checks for stale data, position differences, and risk limits; a blended strategy reached a **0.91 Sharpe** and **19.9% max drawdown** from 2005–2026 (IBKR paper verification pending).

EXPERIENCE

- **Purolator Inc., Delivery Driver** *April 2025 – Present* Laval, QC
 - Execute time-critical delivery operations handling **200+ daily packages**, consistently maintaining a **99%+ on-time rate** across dynamic urban and suburban routes.
 - Independently resolve logistical issues (routing, access, labelling) on the fly and optimise daily load organisation to improve route efficiency.
 - Manage high-value shipments with meticulous tracking and professional client-facing service in a fast-paced, high-accountability environment.
- **Vanier College, Tutor — Calculus I, Calculus II & Web Development** *Aug. 2021 – May 2022* Montréal, QC
 - Tutored **25+ students** through weekly one-on-one and group sessions, helping raise average exam scores by approximately **13%** via personalised learning plans.
 - Developed structured review materials and targeted practice problems for Calculus and intro programming courses.

PROGRAMMING SKILLS

Languages: Python, Java, JavaScript / TypeScript, C++, C, C#, SQL

Frameworks & Libraries: React, React Native, Next.js, FastAPI, Node.js, Pandas, Plotly

Tools & Platforms: Git, Docker, Linux, PostgreSQL, SQLite, DuckDB, pytest, CI/CD, Supabase

Spoken Languages: English, French

ADDITIONAL

Interests: Piano, weightlifting, motorcycles, travel (10+ countries)
